

Dear sirs,

This is to confirm that Ham-Let are listed on the Shell Global Solution International List as approved manufacturers for process compression tubing fittings as per July 2005. This approval is valid for new projects outside the USA. We support the alliance between Ham-Let and Multi-Instruments to offer projects a combined bid for fittings and transmitter mounting manifolds.

I would like to stress that this approval does not include the approval to combine fitting components of different make. It is Shell's policy not to mix these items as is it Shell's policy to select only one vendor for a site. We expect Ham-Let to respect these policies.

With the next release (end of this year) of the List of Selected Instrument Manufacturers (Losim) Ham-Let will be included.

This e-mail (without any change) may be used for commercial purposes until the next release of the Losim.

I trust I have informed you sufficiently.

Regards/Vriendelijke groeten
